

Surge

Heavy duty alkali for liquid laundry systems

Descriptions

- Surge is a highly alkaline liquid used as an alkalinity source in commercial and on-premise laundries.
- Contains water softening and anti redeposition agents for optimum cleaning.
- Surge can be used on all wash classifications except woollens and silk.

Use Directions

Surge is designed specifically for use in automatic liquid laundry systems. It should only be dispensed via Chemform equipment. Surge may be used as a break alkali or used in conjunction with Flow in the wash cycle. As each wash classification requires different quantities of Surge your Chemform representative will establish and monitor the correct amount of Surge for each wash program.

Safety Information

Surge is a corrosive liquid. Extreme care must be taken when handling the product. Wear protective clothing and avoid contact with skin and eyes.

First Aid:

If poisoning occurs, contact a Doctor or Poisons Information Centre. If in eyes, hold eyes open and flood with water for 15 minutes and obtain urgent medical attention. If swallowed, do NOT induce vomiting. Give a glass of water and seek medical attention. If skin contact occurs, remove contaminated clothing and wash skin thoroughly.
