

Gel Whiz

Bore stain remover in gel form

Application

For the removal of bore stains from hard surfaces.

Features & Benefits

- GEL WHIZ is ready to use no mixing or dissolving required. Just paint directly onto stained surface.
- GEL WHIZ is a thick gel. It adheres to the surface which gives longer contact time which means better stain removal.
- GEL WHIZ works well on all bore stains except those that are very old and no longer soluble.
- GEL WHIZ is phosphate free and does not contain hydrofluoric acid which can cause serious accidents.

Use Directions

Use as received. DO NOT mix with water or any other chemical. Simply paint onto affected surface. Allow 15 to 60 minutes for stain to disappear. Flush with tap water.

Operational Hints

GEL WHIZ contains organic acids. Contact with limestone, marble and other forms of calcite will dissolve the stone. Care should be taken when applying to rock or stone surfaces. A spot test on the stone surface should be performed first to assess suitability.
