

SSP

Stainless Steel Polish

Features & Benefits

- The new and improved, oil based SSP provides a very efficient one-step method for polishing and protecting stainless steel surfaces, appliances such as fridges, dishwashers, kettles, toasters, oven doors, stove tops, range hoods as well as BBQ's, door handles, etc.
- Reduces maintenance. As SSP leaves an invisible protective film on surfaces, it repels fingerprints and reduces the need for frequent cleaning.
- Leaves a shiny gloss long after application.
- Great at removing oily fingerprints, spatters, residue, grime and stains.
- Versatile – can be used on stainless steel, polished aluminum and other metal surfaces.

Use Directions

Easy to use. Just spray it on and wipe away with a light gentle pressure and a soft cloth or lint free paper towel.

Water based food or baked on grime is best removed with water and a neutral detergent first. Once clean, apply SSP as above.

DO NOT scrub and always follow the grain when wiping rather than using a circular motion.

DO NOT use SSP on plastic surfaces or other non-metallic surfaces without testing prior to broad application in a non-conspicuous area first.
